DETAILED ACTION

The following is an examiner's statement of reasons for allowance:

Claim 1 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including: (1) a method for manufacturing a screen cylinder, comprising: fastening a plurality of longitudinally-extending screen wires at lateral intervals about a plurality of ring-shaped support rods, each support rod defining an axis extending there through and the support rods being arranged in a spaced-apart relation; and mounting an end ring to the at least one of the support rods closest to one of the ends of the screen surface, in a shrink fit there between, whereby a force resulting from the shrink fit is directed substantially perpendicularly to the screen cylinder axis, and acting between the end ring and the at least one of the support rods, secures the screen cylinder surface in substantially immobile relation relative to the end ring via the at least one of the support rods.

Claim 9 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including: (1) a method for manufacturing a screen cylinder, comprising: fastening a plurality of longitudinally-extending screen wires at lateral intervals along each of a plurality of elongate support rods; forming each of the support rods into a ring shape such that each support rod defines an axis extending there through, the support rods

being arranged in spaced-apart relation such that the axes thereof are coaxially disposed to define a screen cylinder axis; and mounting an end ring to the at least one of the support rods closest to one of the ends of the screen surface, in a shrink fit there between, whereby a force resulting from the shrink fit is directed substantially perpendicularly to the screen cylinder axis, and acting between the end ring and the at least one of the support rods, secures the screen cylinder surface in substantially immobile relation relative to the end ring via the at least one of the support rods.

Claim 17 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including: (1) a screen cylinder for cleaning or screening fiber pulp, comprising: a plurality of ring-shaped support rods, each support rod defining an axis extending there through and the support rods being arranged in spaced-apart relation such that the axes thereof are coaxially disposed to define a screen cylinder axis, a plurality of longitudinally-extending screen wires fastened at lateral intervals to the support rods such that the screen wires cooperate with the support rods to form a cylindrical screen surface of the screen cylinder; and an end ring configured to be shrink fit mounted to the at least one of the support rods closest to one of the ends of the screen surface, the shrink fits end ring thereby being configured to exert a force directed substantially perpendicularly to the screen cylinder axis the force acting between the end ring and the at least one of the support rods, to secure the screen cylinder surface in substantially immobile relation relative to the end ring via the at least one of the support rods.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
